About this report

This report tracks the grantmaking of a fictional corporate giving fund from FY2021 through FY2026. It shows how much was awarded, to whom, where, and for what, and how the fund is doing against its five-year goals. Every name, organization, and figure in it is fictional sample data.

How the numbers are counted

A multi-year grant counts in full in the fiscal year it was awarded. Fiscal years run July 1 to June 30.

People reached uses an adjusted figure. Grants awarded in FY2021 and FY2022 used a report form that counted repeat visits, so their reported reach is multiplied by 0.60. Reach figures flagged for review are left out until the grantee confirms them.

Two programs were renamed during the period. Their history is combined under the current program name, and the Investment History page lists the old and new names.

How to use it

The fiscal year, program, and region filters at the top of each page change every number on that page except the five-year goal gauges, which always use the full portfolio.

The Grant Explorer page lists every grant. Use More options and then Export data on the table to download the rows that are showing.

How it was built

The report is a Power BI model with eight tables loaded from one Excel workbook: a grants fact table, dimension tables for organizations, programs, geography, and a fiscal calendar, a bridge table for the populations each grant serves, a program name crosswalk, and a targets table that holds the annual budgets and five-year goals. Sixty-eight measures handle the totals, the reach adjustment, fiscal-year time intelligence, budget comparisons, and goal progress.
